

~~Cond A~~
a screen plate provided with two or more printing patterns disposed in a single plate frame of the screen plate, each of the two or more printing patterns being formed with a plurality of mesh holes,

wherein at least two of the at least two or more printing patterns have different aperture ratios of the mesh holes.

~~AE~~
6. (Amended) A method for manufacturing an electronic device, comprising the steps of:

forming two or more printed patterns on a ceramic green sheet by pressing electrode paste through a plurality of mesh holes in two or more printing patterns in a screen-printing plate, wherein at least two of the two or more printing patterns include mesh holes providing the two or more printing patterns with different aperture ratios.
